

Enabling EDIE Acute

Enabling EDIE (Educational Dementia Immersive Experience) Acute is an immersive workshop that enables you to see the world through the eyes of a person living with dementia. Using our virtual reality technology, this workshop enhances knowledge of dementia while exploring environmental factors particularly associated with an acute care environment and strategies to improve dementia support.

You will gain knowledge in:

- The perspective of someone living with dementia.
- Identifying environmental factors particularly associated with an acute care environment and how to reduce the impact.
- How to support people living with dementia, through communication and their environment.

Suitable for:

Staff in the acute care setting providing direct support to people living with dementia and their carers.

When:

Where:
