

What is Talk to Me?

Talk to Me is a Progressive Web Application built for iPad, iPhone and Android to facilitate brief, sentence based, one-directional basic information in multiple languages other than English.

The Application focusses on key areas of daily routine communication with a preliminary focus on elderly Culturally and Linguistically Diverse (CaLD) patients in sub-acute settings.

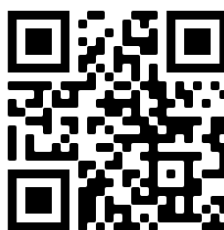

Please note that **Talk to Me** does NOT replace the vital role of an interpreter. An interpreter should always be engaged to communicate the important points in the continuum of patient care.

TalktoMe

How do I download the Application?

Go to <https://talktome.svhm.org.au/> or scan the QR code to access the SVHM Talk to Me Application. Please make sure to use Google Chrome.
